Reflector

Double Ended Fixture

The ILUMINAR DE 630W CMH reflector will allow the fixture to be further from the top of the canopy and focus more essential PAR light to the plants. The reflector was designed to have a narrow-focused pattern of light around the 8' to 10' area. If you need a lower clearance, look for our Wide Reflector that will allow up to 4' clearance to canopy.

PHYSICAL SPECIFICATIONS

Length	270mm	10.63"
